PROFESSIONAL SUMMARY

Passionate Software Engineering student and full-stack developer with experience building production-grade web and cross-platform mobile applications. Skilled in translating complex business requirements into scalable architectures, clean REST APIs, and intuitive user interfaces. Actively seeking junior software engineering roles and freelance opportunities to deliver high-impact, real-world solutions, with a strong enthusiasm for exploring AI-integrated software development.

EDUCATION

Premier University Chattogram, Bangladesh
B.Sc. in Computer Science and Engineering *Current Student (6th Semester)*

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL.

Backend & AI Systems: Node.js, Bun, Express.js, LangGraph.js, Gemini API, PostgreSQL, Redis, Prisma ORM, Inngest.

Frontend & Mobile: React.js, Next.js (App Router), React Native, Expo, Tailwind CSS, TanStack Query, Motion.

DevOps & Tools: Docker, Git, GitHub Actions, Postman, Linux, Upstash, Supabase.

PROJECTS & ENGINEERING EXPERIENCE

Full-Stack Coaching Center Management System Live | Frontend | Backend
Next.js, React, Node.js, Express.js, PostgreSQL, Prisma ORM, Redis, Stripe, Docker

- Architected a full-scale institutional operations platform featuring 93 REST endpoints, strict schema validation, multi-persona RBAC (Admin, Teacher, Student), and a 7-day collision-free routine scheduling matrix.
- Developed a zero-cloud in-memory streaming document engine using PDFKit that dynamically synthesizes official invoices and grade cards in under 15ms.
- Integrated a dual-channel financial pipeline combining Stripe Checkout sessions with automated local mobile financial services (bKash/Nagad) and Redis OTP state management.

CashPilot AI – Autonomous SME Financial Intelligence Live | Telegram Bot
Next.js 16, LangGraph.js, Gemini API, Bun, Prisma, PostgreSQL, Redis, Inngest

- Engineered an autonomous agentic financial operating system with deterministic mathematical safety, executing 30-day rolling cash runway forecasts and aggregations exclusively in TypeScript and PostgreSQL to prevent LLM calculation drift.
- Architected a cyclical multi-tool agent state machine using LangGraph.js and Gemini 3.5 Flash bound to 8 backend tools with automated failover to Groq Llama 3.3.
- Built an omni-channel Telegram bot (@cash_pilot_ai_bot) delivering sub-3-second receipt and invoice OCR parsing, syncing in real-time with the Next.js 16 web management console.

ACHIEVEMENTS

- **1st Runner Up – ICT Olympiad Bangladesh (2023):** Secured national placement in a prestigious competitive technology Olympiad, demonstrating algorithmic problem-solving and rapid debugging capabilities.
